

SPACESHIP OPERATING SYSTEM MANUAL

Supplementary Materials

TABLE OF CONTENTS

Chapter 1.	So You Want to Fly a Spaceship
Chapter 2.	Modes
	2.1 Setup
	2.2 Switching Modes
	2.3 Some Tips on Safety
Chapter 3.	Toolkit
	3.1 Controls
	3.2 Backup
	3.3 Remote Activation
Chapter 4.	Data
	4.1 Camera
	4.2 Material Analysis
	4.3 Ship Analysis

This page intentionally left blank.
Please see Main Manual for full text.

LIST OF COMMANDS

- e X** Enter directory X
- exc X** Execute program X
- u** Go up one level in the directory tree
- ext** Exit currently running program

FOOTNOTES

Chapter 1:

[1] Amateur pilots almost always stick to virtual space, as the driver's certification is fiendishly difficult.

[2] We are required to inform you that the Academy for Astronomical Arts highly frowns upon such behavior.

[3] The definitive text on interstellar tourism remains The Hitchhiker's Guide to the Galaxy.

Chapter 2:

[1] For an example, see the case of Young Motorcyclist vs. The Academy for Astronomical Arts, 347 A.C. 483 (2097). This case had far-reaching consequences, including establishing the standard that required all spaceships to contain a read-only file that listed the current velocity of a spaceship. See Chapter 4.3, p1049

[2] When asked whether or not the PIN referred to a date of any significance, Dr. Gaem replied, "Of course! Nobody ever forgets the year they publish a paper that earns them the Nobel Prize!"

[3] The authors have never personally observed this behavior and suspect it is apocryphal.

Chapter 3:

[1] Manual controls do have the advantage of being significantly more fun, once you know what you're doing.

[2] Note, INITIAL_TAKEOFF_MODE_BACKUP is only present in versions 4.35 and higher of the Spaceship Operating System.
